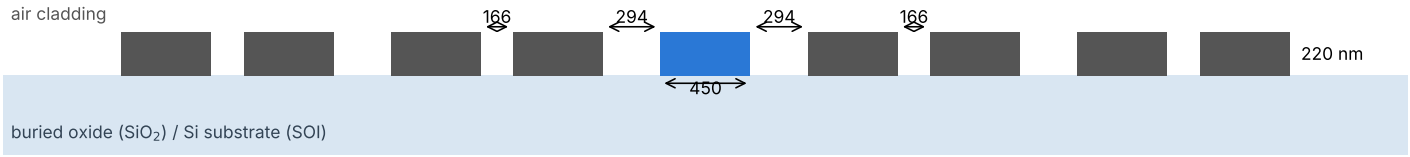
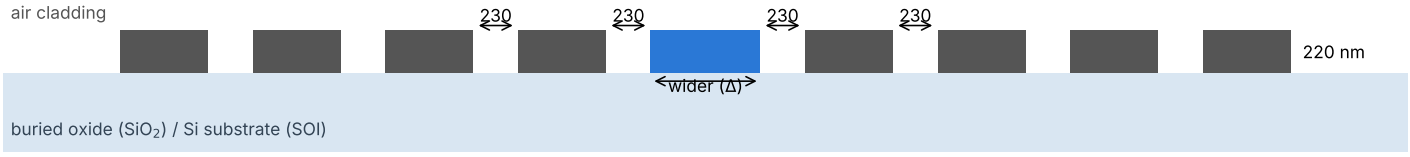
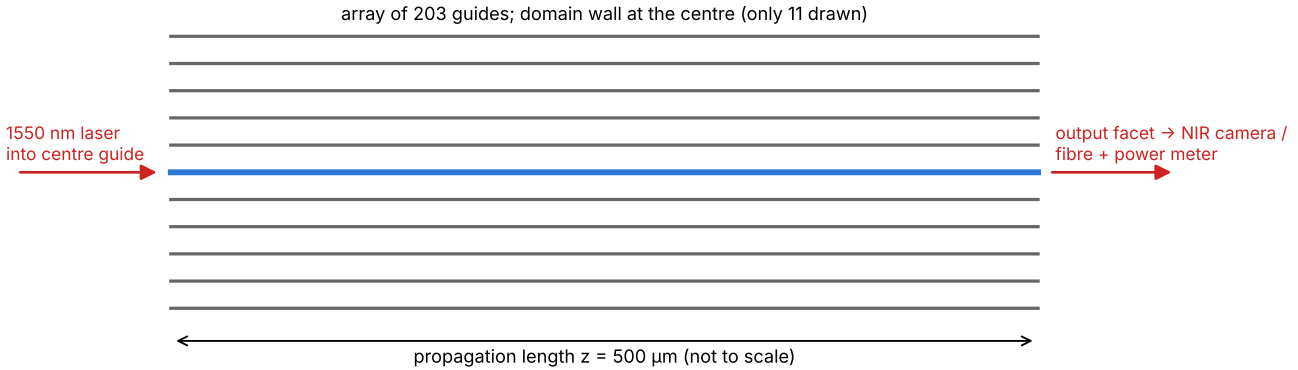
(a) T: 'long-long' topological interface, cross-section to scale (dimensions in nm, from Blanco-Redondo et al. 2016)



(b) D: conventional defect — uniform 230 nm gaps, wider centre guide (our trivial reference)



centre width for the matched Δ NOT computed yet (needs a mode solver) — drawn illustratively


(c) top view of the measurement idea in [6] — SCHEMATIC, not our hardware
